Industrial Oil Absorbent EcoSmart Pads

EcoSmart Foams

Through a distribution partnership with AirTech, manufacturer of environmental friendly foams, SST is proud to bring you a line of innovative industrial foams designed specifically for the oil industry. These industrial foams are made from soybean oil, a renewable and sustainable resource. In addition, these foams are 100% recyclable and manufactured with no harmful by-products and no ozone depleting chemicals.

These industrial foams are tough because a unique chemical reaction provides for more cross link density, giving them elastic strength, and longer life than traditional foams.

Unlike other foam manufacturers, these foams are manufactured in a facility that produces zero emissions and the entire process produces negative carbon footprint.

Best of all, these foams are designed, engineered, and made in the U.S.A.

SST's line of EcoSmart Foams are not only environmentally-friendly, they are oil absorbent and hydrophobic. These foams come in various shapes and sizes engineered to tackle oil spills from oil absorbing pads and sponges to oil absorbent booms. In addition, Airtech's Smart Foam meets or exceeds all EPA requirements as a sorbent material.

The most absorbent foam
on the market!

SST offers a variety of foams for your industrial application.

EcoSmart Pads

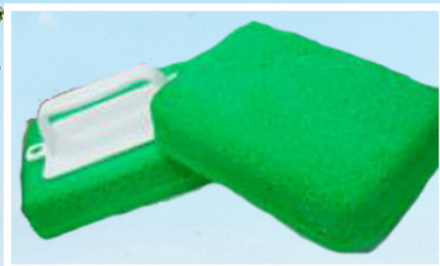

EcoSmart Pads are specifically designed for use to contain minor oil leak or spill on land and water. The pads are engineered from the same Smart Foam formulation which makes it highly absorbent and floats on water. The pads are re-usable, which helps our customers with a cost saving solution. Captured oil can then be extracted and recycled or disposed of properly.

The pads will not tear or break apart. The pads are available in various sizes.

EcoSmart Sponges

These sponges are the most absorbent in the industry. Our sponges are lightweight and easy to use.

EcoSmart Oil Containment Booms

Classified by the EPA as "sorberent," our oil containment booms will absorb oil but not water.

Our foam-based booms are engineered from the same vegetable oil formulations as our leading smart pad products.

These booms are designed to provide a quick and reliable means to contain oil and the boom is fast to deploy, lightweight, and easy to handle. Available in various sizes and lengths can be customized.

EcoSmart xTractor

This patented extractor is a rugged and powerful tool that makes extracting oil and other contaminants from your foam based pad or boom products easier than before. Made of high quality materials, heavy duty, efficient and competitively priced petroleum collection system on the market.
